Professional Summary

Product Designer (UX/UI) with 5+ years of design experience and a strong background in fintech/payments, edtech and B2B operations, designing web and mobile products. I simplify complex operational workflows into clear, scalable interfaces, with measurable results: 64% less time for students to start their first course, 45% fewer support tickets and 30% higher user adoption. I design in Figma and build with AI: I turn designs into working prototypes and live web products, closing the gap between design and engineering.

Professional Experience

Enovus+ — UX/UI Designer

Apr 2026 - Present

- Own the UX/UI design of the LMS Suite, a multi-tenant corporate learning platform serving 100+ client companies with 250+ courses in Chile and Colombia.
- Audited 6 critical modules and prioritized the flows every student goes through (login, home, my courses), validating each change through user testing with Maze.
- Redesigned the home and course states to surface what each student must take first: time to start the first course dropped 64% and "where do I start" support tickets fell 82%.
- Designed and shipped accessibility controls to production: adjustable text size (up to 125%) and a high-contrast theme.
- Building the product's design system from scratch, defining components, tokens and patterns to scale consistency across modules and markets.
- Use AI to prototype features directly in code on a local copy of the product, handing engineering working references instead of static mockups.

Abastible — UX/UI Designer (Contract)

Aug 2025 - Mar 2026

- Led the design of "One Device", migrating field operations from 2 devices (tablet + POS) to a single POS system, auditing 6 workflows and ~70 screens.
- Resolved critical issues in payment, dispatch, route data, invoicing and form validation that blocked field work.
- Redesigned key flows (route scheduling and dispatch), improving information hierarchy, navigation, validation logic and error prevention.
- Iterated each flow with users and delivered detailed developer handoff with acceptance criteria and edge cases.
- Results after implementation: support tickets down 45% and completed daily orders up 20%.

HF Solutions — UX/UI Designer

Jun 2024 - Jan 2025

- Designed and led end-to-end the PayScan POS + Backoffice ecosystem, delivering two products in ~3 months.
- Defined the core POS purchase flow for vending machines, optimizing speed, clarity and operational efficiency.
- Built a scalable Backoffice structure (Merchants › Branches › Devices) including monitoring, configuration, remote updates and sales tracking.
- Enabled B2B self-service features, transferring ~30% of recurring operational tasks to merchants (configuration, monitoring, billing).
- Designed a 3-role permission system (super admin, merchant, cashier) to ensure governance and operational control.
- Delivered a scalable solution capable of managing ~800 devices.

eClass — UI Designer

Jul 2022 - Jun 2024

- Led the redesign of Campus Virtual into eClass On Demand, improving 15+ screens across 6 key modules.
- Reorganized a catalog of 150+ courses across 15 categories to improve navigation and content discoverability.
- Designed a visual signaling system for mandatory training programs to improve compliance visibility.
- Partnered closely with engineering to ensure visual QA and implementation consistency.
- Achieved 30% user adoption growth, closing the team OKR.

eClass — Graphic Designer

Aug 2017 - Jul 2022

Brand and marketing design on the marketing team: social media, presentations, audiovisual pieces and internal and external campaigns for different business units. Promoted to UI Designer in 2022.

Selected Projects

Arrieta Club — arrieta-club.vercel.app

Self-initiated product · designed and built with AI

- Organizing padel matches at my club meant a chaotic WhatsApp group, last-minute dropouts and half-empty courts, with the owner taking every booking by hand.
- Designed an app where a match fills in a few taps: players join through a shared link, commit with a small deposit, and incomplete matches free the court automatically.
- Spotted the problem as a player, defined the product end to end and built it with AI into a live, working app.

Education

UX/UI Design — Coderhouse

2022

Graphic Design — Universidad Arturo Michelena

2016

Skills

UX/UI Design

UX Research, Usability Testing, User Flows, Wireframing, Design Systems, Interaction Design, Prototyping

Product

MVP definition, prioritization and scope management. End-to-end discovery to delivery. Strong product thinking (problem framing, trade-offs, constraints)

AI-Assisted Design & Build

AI-assisted prototyping, design-to-code, front-end implementation, functional prototypes, live deployments

Tools

Figma, Maze, Framer, Miro, Jitter, Adobe Illustrator, Photoshop, Canva

Additional

Motion Graphics, Typography, Visual Communication, Presentation Design

Languages

Spanish (native) · English (B2, upper intermediate)
